

Built To Last

Top-notch automotive construction ensures that Somerset Camping Trailers are built to last and can go just about anywhere you want to take them. They are the only folding trailers made with a 6-inch full tubular steel frame construction and the exclusive stainless steel Posi-Lock lift system.

Stainless Steel Posi-Lock Lift System

The lift posts on our exclusive Posi-Lock lift system are made of stainless steel that will not corrode or bind. Unlike other folding trailers, the Somerset lift system is designed to channel water to the ground and away from the trailer, eliminating the need for tent flaps to protect them from the elements.

The Posi-Lock lift system uses a current limiter microprocessor that automatically stops at the top at the appropriate height. There is also a dynamic brake in the electric motor that locks the top in place - eliminating the need for additional bracing.

Standard on all models is an awning that easily attaches to this rail on the roof, allowing you to create your own shade anywhere you go.

One-Piece Aluminum-Skinned Roof

All Somerset Camping Trailers have a time-tested, one-piece, seamless, .030 gauge aluminum-skinned, insulated roof that is folded on all four sides for added strength without added weight. It is the only seamless roof in the industry and the only roof constructed completely free of wood. **NO WOOD! NO SEAMS! NO PROBLEMS!**

Sunbrella Tent

- Sectionalized, marine-quality, fire retardant, Sunbrella 302 tenting encompasses the Somerset Camping Trailer. It will not fade, mildew or rot like cotton or canvas tenting.
- Sunbrella 302 tenting is breathable and stays fresh. It won't trap heat and moisture that leave a musty odor like vinyl or coated materials.
- Sunbrella 302 tenting is strong, yet lightweight and it won't shrink or stretch. It

Steel Body Panels

Powder-coated, poly-textured, .040 gauge galvanized steel body panels are riveted directly to the trailers structural skeleton. This permits the trailer to flex due to road conditions. Most competitors rely on staples, screws, laminated wood framed side-walls and interior furniture for structure instead of a durable steal super structure.

Front Storage Deck

For those that want to take their toys with them, the 55"x 85" storage deck fits the bill. Whether you are taking your quad, a small golf cart or some off-road dirt bikes, the E3 Deck will get you and your gear just about anywhere you want to go. The Somerset Evolution series is designed for those who crave adventure and yearn to travel off the beaten path. Aluminum gates also serve as ramps.

E3 Front Storage Options

There are 3 different chassis options for the Somerset E3. Choose between the front deck, the front storage box or the standard chassis that has no front storage. Depending on how you will use your E3, we have the right Off-Road chassis for you.

Rotationally Molded Front Storage Box

Wet-gear? Fire wood? Greasy grill? No problem! This trunk is pretty much indestructible and you can simply hose it out when you get home from your off-road journey. No worries about water intrusion, rotted wood or mold. Just like the rest of the Somerset construction there is nothing here to rot!

No Front Storage

If you don't need the extra storage, or if you are trying to fit your new Evolution into a tight garage, the E3 without front storage is only 17' long in the closed position.

Why only one floor plan?

There are many floor plans offered in the folding trailer industry. We've seen them all and built them all over our 40+ years of producing folding trailers. One thing that we have learned is that there is only one layout that provides a wide-open floorplan with plenty of sleeping capacity. A floorplan that doesn't require crawling over a cabinet or sofa to get into bed. This is the most popular floor plan in the industry and the only one we recommend.
